

AMENDMENTS TO THE SPECIFICATION

Please substitute the paragraph beginning on page 4, line 17 of the specification with the following replacement paragraph.

The processor may process a first command using the first command line interface and a second command using the second command line interface. The first command and the second commands may be addressed to boards having the first board type. The processor may also receive commands addressed to multiple boards and routes the commands ~~boards~~ to the multiple destinations.

Please substitute the paragraph beginning on page 13, line 3 of the specification with the following replacement paragraph.

At step 412, the system may route the command to the proper board. For example, if the command has a Destination of board 3 in chassis 1, then the system routes the command to board 3 in chassis 1. The command ~~board~~ may be routed to the board using any type of protocol, for example, using the SNMP protocol. Other examples of protocols may be used.
